

May 20th, 2026

European radar data and products are now openly available via Open Radar Data (ORD)

As part of the EU- and EUMETNET-funded **RODEO project**, the partners have developed **MeteoGate** (<https://meteogate.eu/>), a new platform for discovering and accessing meteorological data.

One of its key services is the Open Radar Data (ORD) API. We are pleased to announce that the ORD API is now fully open and operational and provides access to:

- **EUMETNET OPERA single-site volume radar data** (real-time and archive (archive is still pending))
- **EUMETNET OPERA composite products** (real-time and archive, both in HDF5 and Cloud-optimized GeoTiff formats)
- **National radar products** Links to national interfaces for demonstration of national radar-based products

With this transition from pre-operational to operational status, **whitelisting is no longer required**. Noting the change in the access point addresses and notification service port, the following ORD services are now openly available:

- ORD API via [MeteoGate Gateway](#)
- [ORD API swagger UI](#)
- [Notification service](#): The MQTT connection parameters have changed: username: everyone, port: 8884

The old addresses and MQTT will be working until June 30th, 2026, but please change to the above new ones before deprecation day.

Please note the following usage limits for ORD API to ensure fair availability for all users:

- ORD API Anonymous users: 60 requests per hour
- ORD API Registered users: 600 requests per hour

Detailed guidance on how to discover and download data is available here:

- [ORD API documentation](#)
- [Discovering and accessing radar data](#)

The ORD data supply is not yet searchable through [MeteoGate Data Explorer](#); this feature will be available soon.

Support and Contact

If you have any questions or requests, you can reach us through the following channels:

- Submit a ticket via the [MeteoGate Servicedesk](#)
- Post a question in the [MeteoGate discussion forum](#)
- Contact EUMETNET OPERA directly at support.opera@eumetnet.eu

Mailing List

The **EUMETNET OPERA Programme** maintains an information mailing list for updates on:

- OPERA production and ORD API data disruptions
- Planned maintenance periods and releases

To subscribe, email: info.opera-subscribe@posti.fmi.fi

To unsubscribe, email: info.opera-off@posti.fmi.fi

Alternatively, you may request to join sending email: support.opera@eumetnet.eu.
